

Kitchcu

QA Instruction Pack - Smoke, Lists/UI, F19b Stock & Bulk Prep

Kitchcu cloud kitchen platform

Audience: QA Lead, Engineering, CPO release sign-off

Three executive lenses:

- Product - clear owner/customer/admin journeys and expected screens
- Engineering - gateway routes, stock deduct timing, automated test hooks
- QA - Must/Should cases, defect template, Go / No-Go sign-off

This guide includes:

- Local Docker + optional GCP smoke credentials and ports
- Owner list toolbars: search, sort, filter chips (Orders, Menu, Ingredients,
- Bulk prep, CRM, Coupons) + header/dropdown/layout polish checks
- F19/F19b: pantry, recipes, deduct modes, mark prepared, Ready-time stock
- Security, correlation IDs, tenant isolation, pytest focus commands

Version 1.0 | July 2026 | Confidential

Table of Contents

PART 0 - Setup

- 0. How to use
- 1. Environments, ports, credentials
- 2. Smoke suite (blocking)

PART I - Owner UI

- 3. Headers, listing toolbars, dropdowns, panels
- 4. Orders / Menu / Ingredients / Bulk prep / CRM / Coupons

PART II - Stock & Ops

- 5. F19 / F19b Ingredients + Bulk prep
- 6. Order lifecycle vs stock deduct
- 7. Cross-persona + security

PART III - Close

- 8. Automated tests
- 9. Defect template + sign-off
- 10. Cross-references

How to Run QA

1. How to use this pack

- Run Setup once per environment.
- Execute Smoke (Must) before deep QA - fail stops the run.
- Mark each case Pass / Fail / Blocked.
- Pass rule: every Must case Pass; Should may Fail only with waiver.
- Source markdown: docs/QA-INSTRUCTION-PACK.md - keep PDF in sync.

2. Environments & credentials

Local stack

Item	Value
Start	docker compose up -d
Seed	.\scripts\seed-all.ps1
Backend tests	.\scripts\run-tests.ps1
Portal	http://localhost:13000
Customer	http://localhost:13001
Kitchen (owner)	http://localhost:13002
Admin	http://localhost:13003
Gateway	http://localhost:18000

After kitchen-web rebuilds: hard-refresh or unregister the PWA service worker if the UI looks stale or black.

Demo credentials

Persona	Login	Notes
Owner	9876543210 / OTP 123456	Kitchen CKPNQ001
Customer	9123456789 / OTP 123456	See AGENTS.md for more
Admin	admin@kitchcu.dev / admin123456	Platform JWT only

3. Smoke suite (Must - ~15 min)

ID	Step	Expected
S1	Gateway /health/live + /ready	200
S2	Kitchen OTP login -> Overview	Hero + kitchen; no blank screen
S3	Customer OTP login -> home	Discovery/menu loads
S4	Admin login -> overview	Dashboard loads
S5	Portal home	Brand hero; no crash
S6	Gateway /docs or portal /openapi	Schema loads

Fail any of S1-S4 -> stop deep QA; fix infra first.

Headers, Lists, Filters, Dropdowns

1. Home / Overview header

ID	Check	Expected
H1	Hero layout	CTAs top-right on same row; not button u
H2	Pills / meta	Readable; no overflow clip
H3	Recent orders	Clickable rows; status chips coherent

2. Listing toolbar coverage

For each page: toolbar visible; search filters; sort reorders; chips toggle; result count updates.

ID	Page	Route	Extra
L1	Orders	/dashboard/orders	Drafts tab also sorts
L2	Menu	/dashboard/menu	Highlight + diet chips
L3	Ingredients	/dashboard/ingredients	Low stock chip
L4	Bulk prep	/dashboard/prep	Open / Prepared chips
L5	CRM	/dashboard/crm	VIP / Repeat / Tagged
L6	Coupons	/dashboard/coupons	Active / Inactive

3. Layout & dropdown CSS

ID	Check	Expected
U1	Panel width	Full board width; not ~560px stub for li
U2	Selects	Chevron + theme fill (Templates, Tiffin,
U3	Tables	Aligned columns; no nested card-in-card
U4	Recipe cards	Label above control; compact Remove butt

F19 / F19b + Lifecycle

1. Ingredients mapper (F19)

ID	Step	Expected
I1	Open Ingredients	4-col pantry form; Add works
I2	Adjust +100 / -10	Stock updates; no 404
I3	Save recipe + prep steps	Persists after reload
I4	Low-stock chip	Only low items shown

2. Bulk prep + deduct modes (F19b)

ID	Step	Expected
B1	Open Bulk prep	Mode buttons; no Not Found
B2	Order Ready mode	Orders deduct on Ready
B3	Create combo batch	Batch + ingredient lines
B4	Edit qty + save	Totals persist
B5	Mark prepared	Status prepared; stock drops
B6	Bulk prep only mode	Orders do NOT deduct on Ready
B7	Gateway stock/prep APIs	200 with owner JWT (catalog)

3. Order lifecycle vs stock

ID	Step	Expected
O1	Place order (mapped dish)	status received
O2	Accept	Stock unchanged; Porter may book
O3	Mark Ready (order_ready)	Stock deducts once
O4	Further status changes	No double deduct
O5	Ready under prep_batch_only	No order deduct

4. Cross-persona + security

ID	Check	Expected
R1	Customer checkout	Order reaches owner inbox
R5	Tenant isolation	No cross-kitchen CRM/stock data
X1	Owner JWT on admin APIs	Rejected
X2	Logs	No OTP / full phone / tokens
X3	Correlation ID	Forwarded when sent
X4	Public /internal/*	Gateway 404

Automation, Defects, Sign-off

1. Automated tests

After backend changes run:

```
.\scripts\run-tests.ps1
```

Focused F19b:

```
cd services/catalog
python -m pytest tests/test_prep_batches.py -q
cd ../order
python -m pytest tests/test_stock_deduct_on_ready.py -q
cd ../gateway
python -m pytest tests/test_gateway.py::test_resolve_service_url_catalog -q
```

2. Defect report template

Title:
 Environment: local | GCP
 Surface: portal | customer | kitchen | admin | API
 Severity: S1 blocker | S2 major | S3 minor | S4 polish
 Steps:
 1.
 2.
 Expected:
 Actual:
 Screenshot / correlation ID:
 Workaround:

3. Sign-off

Role	Name	Date	Go / No-Go	Notes
QA Lead				
CTO / eng				
CPO				

Go criteria: Smoke Pass; Owner list/UI Must Pass; F19b Must Pass; security Must Pass; automated tests green for touched services.

4. Cross-references
